Subject: Are you still the water operator for the Polacca water system?

Alfonso,

Since I have not heard anything from the Polacca water system in a while, my first question is whether you are still the water operator for the water system. Having gone through 5 different water operators in 7 years, I thought that would be a logical first question.

How are things going there? I know in January 2015 the Polacca water system received a few violations for not monitoring quarterly for arsenic. Also, since there was absolutely no chemical compliance sampling conducted for the water system in 2014, I was wondering whether you need any assistance (beside funding) to get the water system back in compliance with the chemical monitoring. It is good that, at least, the bacteriologic samples are collected every month.

Let me know how things are going, or whether I should be talking to someone else.
